PAYANSHI JAIN

Jaipur, Rajasthan | payanshijain10@gmail.com | +91-9950661182 | GitHub | LinkedIn | LeetCode

SUMMARY

Full-stack developer skilled in React.js, Node.js, Express.js, MongoDB, and JWT authentication, with experience in RESTful API design, real-time systems, and geospatial search. Seeking a Software Engineer role to build scalable, production-grade applications.

EDUCATION

- Jaipur Engineering College and Research Centre | **Artificial Intelligence and Data Science** | **CGPA: 9.20** | 2023-2027
- Mahatma Gandhi School | Senior Secondary | **82.40%** | 2023
- Shiv Jyoti School | Secondary | **96.00%** | 2021

EXPERIENCE

Cynbit Technologies, Jaipur | *Full Stack Development* JULY 2025 – AUG 2025

- Completed a 6-week full-stack internship, building an Event Registration and Ticketing System end-to-end — from React.js front-end interfaces to Node.js/Express.js back-end services.
- Designed **10+ RESTful API endpoints** covering event listing, user registration, and ticket booking, backed by a **MongoDB schema** with normalized collections for users, events, and bookings.
- Implemented **JWT-based user authentication and role-based access (Admin/User)**, enabling secure access to event management and booking flows.

TECHNICAL SKILLS

- **Programming Languages**: Java, C++, Python, JavaScript, HTML, CSS
- **Frameworks**: React.js, Node.js, Express.js
- **Databases**: MongoDB, MySQL
- **Tools & Deployment**: Postman, Visual Studio Code, Git & GitHub, Render, Vercel
- **Core Concepts**: OOP, Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, Software Engineering

PROJECTS

Tavilyte – AI Chat Application | *MERN, Socket.IO, Gemini API, Tavily, Mistral* GitHub

- Built a **full-stack AI chat application** with real-time streaming responses using **Socket.IO** and Redux (8+ slices), achieving sub-200ms latency and eliminating prop-drilling across 15+ components.
- Integrated Tavily API for live web search, improving AI response accuracy by 60% over static-knowledge replies.
- Leveraged **Mistral model for automated chat title generation**, eliminating manual effort by 100% and cutting token usage 3x versus the primary model.

VendorMap – Offline Vendor Discovery Platform | *React, Node.js, MongoDB, Express, JWT* GitHub

- Built a full-stack, **location-aware web platform connecting local offline vendor**s with nearby customers using React 18 (Vite), Node.js, Express.js, and MongoDB, enabling **GPS-based shop discovery** without payment/delivery dependencies.
- Implemented geospatial search using MongoDB's 2dsphere index and **(`$nearSphere`)** operator, featuring a smart radius-expansion algorithm **(5km → 20km → 50km → all)** with Haversine distance calculations for optimal result relevance.
- Designed and developed **18+ RESTful API** endpoints across **authentication, shop management, and product modules, integrating JWT-based authentication** with HTTP-only cookies, bcrypt password hashing, and **role-based access control (Customer/Vendor)**.

CERTIFICATIONS

Juniper Networks Certified Associate – Junos (JNCIA-Junos) (Juniper Networks | Sep 2026) **Certificate**

Copado AI Certification (Copado | July 2026) **Certificate**

Google Cloud Certificate (GDSC | May 2024) **Certificate**

LEADERSHIP & ACHIEVEMENTS

Smart India Hackathon (SIH) |Led team to Top 23 ranking for developing a functional technical prototype. **Certificate**

Zero Hour Summit (MUN) |Debated global policy issues, presenting structured arguments under time constraints. **Certificate**

Cognizant Hackathon |Participated in the Cognizant Hackathon, advancing to Round 2. **Certificate**
